Managed IT Services

About Us

Who we are?

We, a team of managers, software developers, website developers, designers and search engine optimization experts - from reputed institutions and having long experiences, are working hard to produce the excellent product and services by using the most suitable and latest technologies.

Our Strategies

We at Puissant Technologies do believe in having a development team which is small but efficient to do any complex and world class product. The quality of each and every member of the team is of utmost importance for us. We do not strive for popularity or brand name, which ultimately, unnecessarily charges extra to our clients for brand name and administrative costs.

Our Skill Set

Our team at Puissant Technologies is well versed in designing and developing the web portals. The latest design of the websites include - high conversion rate landing page, excellent functionality among the web pages, simplified and lucid content writings, creative and beautiful graphic design, accessible from all kind of devices like, mobile, tabloid, laptop, desktop etc., are the features which we provide to our customers.

Our Services:

1. Registering, Transferring and Renewal of Domain Names of the websites

Domain Name of your website is the name which you get first before launching your website to www. Registering the domain name of your website connects it to the rest of the world. We help our clients in getting the Domain Name Registration for their websites. We also help the clients in transferring their Domain Names to the servers of our hosting space.

2. Installation or Hosting Services for the websites

After registering the Domain Name for your website, you host or install your ready and designed website on the server machine connected to the internet. Now, your website becomes visible on any computer on the earth which is connected to the internet.

3. Reselling Services for the Hosting Space

We, at PT is also the reseller of the hosting space for others website. The ultra-fast cloud services maintain 99.98% server uptime for the websites hosted on our hosting-servers. This never let you feel tiring due to the long time taken in getting your website opened.

4. Landing Page Design

Landing Page of your website is the one which converts the visitors coming to your website into the potential customers. In view of this importance, the landing page has to be developed with extreme caution.

5. Website Design and Development

We, at Puissant Technologies are working on the two major technologies – PHP and Java.

I. The First Suite of Software

We design and develop websites using multiple technologies. HTML5, CSS3, JavaScript, jQuery, PHP5, MySQL Database, MS Paint etc. are the technologies used in designing and giving more dynamic features to the websites.

II. The Second Suite of software

We design and develop websites using multiple technologies. HTML5, CSS3, JavaScript, jQuery, Java, MySQL Database, MS Paint etc. are the technologies used in designing and giving more dynamic features to the websites.

6. Websites Re-Design, Up-Gradation and Maintenance

We also take the contract to re-design, upgrade or maintain the existing websites.

7. Content Marketing

To improve the quality of your website the relevant, unique and valuable contents has to be pushed on regular and timely basis.

8. Search Engine Optimization (SEO)

The factors which affects the position of a website in the search result are classified into basically two categories – internal as well as external ranking factors. The internal factors can be controlled by the website owner if he or she is aware of the “SEO strategies”.

9. Pay-Per-Click Advertisement or Google AdWords

This is another popular method to get the link of your website on the top of Google Search result. You need not to have a well SE Optimized website for this.

10. Social Media Optimization (SMO)

It helps in getting your businesses connected with social media websites like - facebook, twitter, Google+, LinkedIn, YouTube etc. This is the best way to develop awareness about your brand, services, sales etc. – worldwide.

11. E-Mail and SMS Marketing

This is another way to let people know about your businesses by sending bulk e-mails and SMSes.

12. Analytic Services

We help the small and large enterprises in getting the accurate and intuitive data for simplifying the complex business environments, finding the probability of the outcomes, reducing the risks and taking the right decision for the overall growth in their businesses.

13. E-Commerce Websites

The advent of e-commerce websites have made it possible to shop online for the customers in the global market.

14. Social site Development

This sort of websites is having more and more features for their visitors. There is no doubt that it takes more time to be developed as compare to the normal websites.

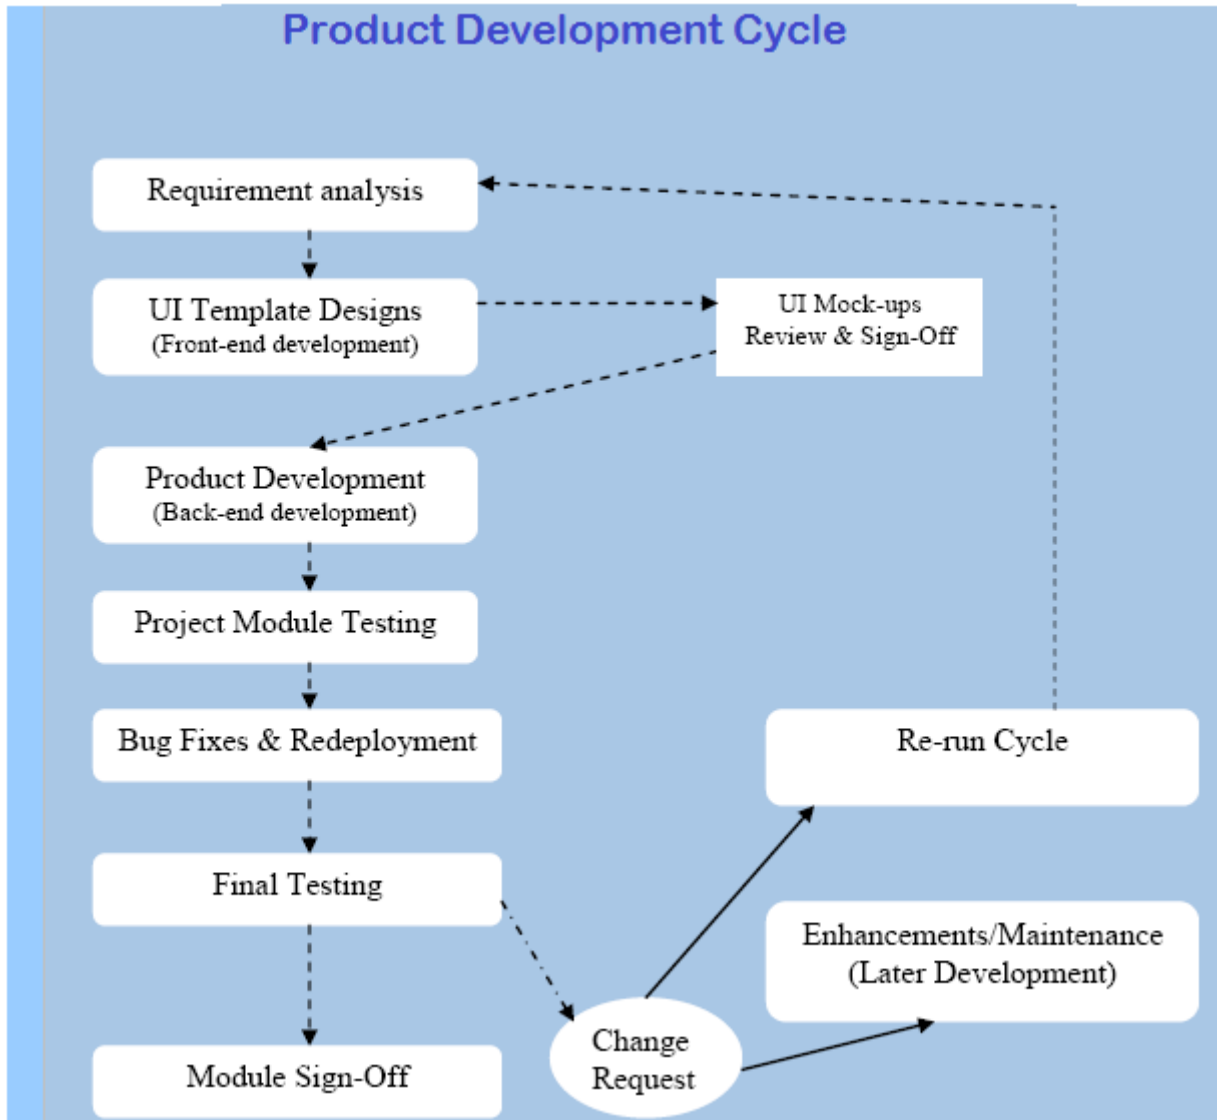

Current Project

Currently, we are working on a social site project which has to be similar to meetme.com.

The entire project is divided into five phases of which the first two have the following descriptions:

Phase wise Project Development -

Phase I.

The complete application is divided into five different phases –

PHASE -1

- User registration
- Send email notification
- User login
- Profile picture upload
- View account basic information
- Logout

Technologies:
